

# Youssef Ashraf ElNaggar

## DevOps & Cloud Infrastructure Engineer

✉ youssef.ashraf.elnaggar@gmail.com ☎ 01026735485 📍 6th October, Giza, Egypt 🔗 linkedin 🐙 Github

🛡 Concluding Dec 1, 2026 (Available for Immediate Full-Time Employment)

### Experience

- |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|
| <b>DevOps Engineer Intern, Valeo</b> <ul style="list-style-type: none"><li>Automated multi-OS Docker image builds and CI workflows using Bash, Python, and Jenkins, slashing manual intervention by 40%.</li><li>Maintained persistent, secure SSH connectivity across 200+ machines, resolving deployment dropouts and system accessibility bottlenecks.</li><li>Automated Git version upgrades across CI nodes and synchronized artifact management in Nexus via Ansible playbooks, decreasing repository sync errors by 80%.</li><li>Standardized CI environment roles and variable auditing using Ansible, boosting debugging and triage efficiency by 50%.</li></ul> | 07/2024 – 09/2024<br>Cairo, Egypt |
| <b>DevOps Engineer Intern, STEM Entrepreneurship Center</b> <ul style="list-style-type: none"><li>Containerized multi-service applications using Docker and automated deployment pipelines with Jenkins.</li><li>Conducted practical workshops and technical mentorship on container best practices, Git branching strategies, and CI/CD pipelines.</li></ul>                                                                                                                                                                                                                                                                                                             | 03/2025 – 05/2025<br>Cairo, Egypt |
| <b>Software &amp; Process Automation Intern, Valeo</b>  <ul style="list-style-type: none"><li>Automated internal project management reports and analytics dashboards using JavaScript / Google Apps Script, reducing manual reporting overhead by 60%.</li><li>Built visual analytical tracking models (gauge &amp; pie charts), saving team leads 4+ hours per week on manual calculations.</li></ul>                                                                                                                                                                                   | 08/2023 – 09/2023<br>Cairo, Egypt |

### Projects

- |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <b>Workplace Assessment &amp; Live Proctoring Platform (Client: Mofarreh Group)</b>  <ul style="list-style-type: none"><li>Architected and deployed a production assessment platform with real-time Socket.IO supervisor auditing, server-side exam scoring, and anti-cheat tab-blur monitoring.</li><li>Built webcam proctoring with MediaRecorder and IndexedDB chunk buffering; containerized React 19 &amp; Express with multi-stage Alpine Docker, deployed to Railway with Sentry APM.</li></ul>                             | 09/2026 – 09/2026 |
| <b>AI-driven Energy Optimization Framework</b>  , Nile University - Graduation Project <ul style="list-style-type: none"><li>Built and containerized the scalable Python backend processing IDF design files, 2D/3D visualizations, and RAG/LLM pipelines with Docker, ensuring consistent multi-developer environments. Automated end-to-end CI/CD via GitHub Actions and deployed microservice APIs to Google Cloud Run, delivering zero-downtime rollouts and secure ingress critical for live platform operations.</li></ul> | 10/2024 – 06/2025 |
| <b>Hybrid Multi-Tier &amp; Microservices Deployment</b>  , DEPI - Graduation Project <ul style="list-style-type: none"><li>Containerized a microservices bookstore with Docker and deployed onto AWS EKS (Kubernetes); provisioned cloud infrastructure with Terraform.</li><li>Configured Jenkins CI/CD on EC2 via Ansible playbooks, secured secrets with KubeSeal, and set up Prometheus &amp; Grafana observability.</li></ul>                                                                                               | 03/2025 – 05/2025 |
| <b>High-Performance Go Microservice with Redis &amp; Kubernetes</b>  , DEPI Program <ul style="list-style-type: none"><li>Optimized a Go-Redis application with Docker and Kubernetes, reducing image size by 97.5% (1GB → 24.5MB) and configuring StatefulSets, PVCs, ConfigMaps, and NodePort services for persistent caching.</li></ul>                                                                                                                                                                                       | 02/2025 – 02/2025 |

### Education

- |                                                                                                                                                                                                                                                                                     |                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| <b>Bachelor of Information Technology and Computer Science, Nile University</b> <ul style="list-style-type: none"><li><b>Cumulative GPA: 3.95 / 4.00 (Graduated with Highest Honors / Excellence)</b></li><li><b>Graduation Project:</b> Grade: Excellent   Class of 2025</li></ul> | Fresh Graduate<br>Cairo, Egypt |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|

### Technical Skills

- Cloud & Infrastructure:** AWS (EC2, EKS, S3, IAM), Google Cloud Platform (Cloud Run), Docker, Docker Compose, Kubernetes (K8s), Terraform, Ansible
- CI/CD & Automation:** Jenkins, GitHub Actions, Linux Administration (Ubuntu/Alpine), Bash Scripting, Git, Nexus
- Observability & Reliability:** Prometheus, Grafana, Sentry APM, ELK Stack, Metric Collection
- Programming & Scripting:** Python, Bash, Go (Golang), TypeScript, JavaScript, SQL, C++
- Databases & Caching:** PostgreSQL, Redis, SQLite, Prisma ORM

### Courses

- |                                                                                                                                                                                                                                      |                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| <b>DevOps Training, DEPI program (MCIT)</b> <ul style="list-style-type: none"><li>Hands-on training in AWS, Docker, Kubernetes, Ansible, Terraform, Jenkins, and Prometheus/Grafana</li></ul>                                        | 10/2024 – 05/2025<br>Giza, Egypt |
| <b>Fundamentals of DevOps, KodeKloud</b> <ul style="list-style-type: none"><li>Built a strong foundation in DevOps principles, automation, LEAN practices, and key metrics for efficient collaboration and transformation.</li></ul> | 02/2025 – 02/2025                |
